Vaccination

Rabies

Of all animal diseases, rabies is the most feared. Most pets are exposed to rabies by bites from wild animals, particularly skunks, bats, raccoons, and foxes. The disease can be transmitted to humans through the bite or scratch of an infected animal, and is nearly always fatal. Vaccination of all dogs and cats is the most effective means of prevention.

Feline Panlekuopenia

Feline panleukopenia, sometimes called "feline distemper," causes severe vomiting, diarrhea, and dehydration. It is the most widespread disease of cats and has a very high mortality rate among kittens. The disease is caused by a virus and is highly contagious, but vaccination is almost 100% effective at prevention.

Feline Calicivirus

Calicivirus infection causes a variety of symptoms including fever, excessive salivation, and ulcers in the mouth or on the tongue. Infections cause severe discomfort but are not usually fatal.

Feline Rhinotracheitis

Rhinotracheitis infection is a widespread respiratory disease caused by a herpes virus. It is most severe in young kittens and can cause profuse discharge from both the eyes and nose, resulting in great discomfort.

Feline Leukemia

Feline leukemia is a virally-induced disease which causes severe bone marrow suppression and high fever. It is related to the HIV (AIDS-causing) virus in humans, though FeLV is not crossspecies contagious. However, it is almost always fatal and untreatable. It is transmitted through bite wounds from infected cats, indiscriminate breeding with infected cats, and in utero transmission to kittens.

Feline Infectious Peritonitis

FIP is caused by a coronoavirus, spread by direct cat-to-cat contact or contact with contaminated surfaces such as food dishes and litter pans. Nonspecific symptoms include severe lethargy, fever, loss of appetite, weight loss, and poor hair coat. It is almost always fatal, with no known cures. Vaccination is controversial and we do not advocate it at our clinic.

Two Harbors Veterinary Clinic

Office Hours: 8 AM to 5 PM Mon/Wed/Fri 8 AM to 12 PM Tuesday Phone: (218) 834-1333
